PROFESSIONAL SUMMARY

Backend Software Engineer with ~4 years of experience building distributed systems, critical integrations, and large-scale logistics platforms. Currently at Luizalabs (Magalu), contributing to services that process millions of logistics transactions monthly for marketplace sellers and end customers. Experienced in API design, event-driven architectures, observability, and full ownership of production services.

TECHNICAL SKILLS

Languages	Infra & Data	Platform	Practices
- Go - Node.js - TypeScript - Java	- PostgreSQL - Redis - RabbitMQ - Docker	- ArgoCD - GitOps	- Clean Architecture - Event-Driven - Observability

WORK EXPERIENCE

Software Engineer | Luizalabs (Magalu)

Nov 2024 – Present

Remote · Brazil

- Designed and developed distributed microservices for critical logistics operations within the Magalu ecosystem, including inventory management, in-store pickup at Magalu Agencies, and label generation for marketplace (3P) orders.
- Took end-to-end ownership of production services — covering architecture, development, observability, deployment, troubleshooting, and operational support.
- Built APIs, BFFs, workers, and async processes in Go and Node.js, applying Clean Architecture principles and scalability patterns for distributed environments.
- Implemented event-driven architectures with RabbitMQ, increasing resilience and async throughput across services.
- Sustained peaks of ~250 req/s during major commercial events with high availability and zero systemic failures.
- Managed deployment and maintenance of applications on Kubernetes using Helm and GitOps workflows with ArgoCD.
- Maintained and evolved 10+ backend services and integrations; actively participated in code reviews, incident response, RCA, post-mortems, and on-call rotations.

Software Engineer | SBsistemas

Apr 2024 – Nov 2024

Marau, RS (On-site)

- Developed features for an electronic fiscal document issuance platform (CT-e) focused on cargo transportation.
- Implemented and maintained backend services in Go, evolving fiscal integrations and complex business rules within the CT-e ecosystem.
- Optimized PostgreSQL queries and routines to improve performance and operational reliability.

Software Developer | DataIntegra

Aug 2022 – Apr 2024

Passo Fundo, RS

- Built integrations enabling secure data exchange between major hospital systems in Brazil, handling sensitive data including patient records and medical reports.
- Implemented new features and maintained critical applications processing sensitive healthcare data using Node.js, TypeScript, and Docker.
- Delivered a ~4-hour Clean Code workshop for university students, covering best practices and applied examples in Node.js/TypeScript.

Customer Support / Implementation Analyst | Vip Informática

Jun 2021 – Aug 2022

Serafina Corrêa, RS (On-site)

- Deployed enterprise software solutions and executed relational database migration scripts in client on-premises environments.

EDUCATION

Associate Degree in Systems Analysis and Development

Universidade de Passo Fundo (UPF)

2020 – 2022
